When You Want To Cut Time and Attendance Costs... Do It By Hand

Schlage Biometrics brings the accuracy and convenience of biometric technology easily within reach of any time and attendance application with the Refurbished HandPunch 1000. In operations that range from coal mines to clean rooms, the Schlage Refurbished HandPunch 1000 has proven itself to be a practical and precise solution for employee time management and access control.

Our Biometric Time Clock, Hand Scanner, Works by Identifying Employees' Hand Geometry Instantly

SchlageRefurbished HandPunch 1000 identifies the employee by the unique size and shape of their hand. This means your employees will no longer need to carry cards or keys. The costs and risks associated with credentials that can be lost, stolen or duplicated without authorization is also eliminated. SchlageRefurbished HandPunch 1000 biometric hand reader also eliminates time fraud by making it virtually impossible to "buddy punch." The result is more accuracy, productivity and profitability for your company.

Your Hand Is Your Card

With the Certified Refurbished HandPunch 1000 there are no cards to create, administer, carry - or lose. For mid-size companies, the Refurbished HandPunch 1000 provides a high return on investment by eliminating the cost associated with administering and managing cards. For companies that have small, multiple locations, minimal supervision leaves an opportunity for buddy punching and time fraud. With the Schlage Refurbished HandPunch 1000 one employee can't punch for the other. Time fraud is eliminated thereby reducing payroll costs and positively impacting your company's profitability.

Affordable Ethernet Solution

The Refurbished HandPunch 1000 comes standard with serial RS232 connection allowing for quick integration into your time management systems, applications and existing network infrastructure.

Hand Geometry Technology

The Certified Refurbished HandPunch 1000 uses Schlage's field-proven hand geometry biometric technology. The Refurbished HandPunch 1000 captures an image of the hand each time the employee punches. The hand's size and the shape are used to verify their identity with unparalleled accuracy. No fingerprints or palm prints are utilized. The technology works well indoor as well as in harsh environments.

Antimicrobial Protection

Every biometric Refurbished HandPunch 1000 contains a silver-based anti-microbial agent-which is embedded into the materials used to produce the platen, providing a finish that inhibits the growth of a broad spectrum of bacteria, mold, and fungi and remains active for the life of the Refurbished HandPunch 1000.

Hand Outline

The Refurbished HandPunch 1000 comes standard with a blue hand outline printed on the platen. This hand outline helps new users place their hand accurately on the platen thus decreasing initial enrollment time and better enrollment quality. It also includes the Ingersoll Rand Schlage Biometrics logo.

Refurbished Warranty

Our certified refurbished HandPunch terminals have been cleaned, re-calibrated, quality checked and

tested. They are all certified at the factory as fully operational. These refurbished terminals carry the same warranty as new HandPunch terminals. With a discount of 30% to 40% off the regular price, you're sure to save a lot of money.

Software

When paired with the AMG Employee Attendance software, the Refurbished HandPunch 1000 delivers tangible benefits and reduces payroll and administration costs. To view our promotional refurbished package, please [click here](#).
